PROFESSIONAL SUMMARY

Software engineer with 6+ years of experience building production systems across TypeScript/Node.js backends, AWS serverless infrastructure, web applications, and AI-enabled products. Strong hands-on track record shipping AI-powered services with RAG, function calling, tool orchestration, observability, and rollout discipline. Experienced using Claude Code, Gemini, Cursor, and related AI workflows as core development multipliers for implementation, debugging, testing, documentation, and decision support. Especially strong in third-party integrations, API design, event-driven architecture, and turning ambiguous product needs into scalable, maintainable systems.

CORE QUALIFICATIONS

- Deep experience with Node.js, TypeScript, APIs, and cloud-backed integrations
- AI-first development workflows with Claude Code, Gemini, Cursor, and spec-driven engineering
- Comfort with ambiguity, fast-moving teams, and founding-style ownership
- Scalable third-party integration patterns and partner-facing reliability mindset
- Production AI services using RAG, function calling, streaming, and tool orchestration
- AWS serverless, event-driven design, observability, and deployment safety
- Strong written specs: BRDs, TRDs, implementation plans, and design decision docs
- Mentoring through code reviews, standards, reusable patterns, and practical AI adoption

PROFESSIONAL EXPERIENCE

STEP.CO | Full-Stack Software Developer

North Vancouver, BC | March 2024 - Present

- Designed and operated a modular, event-driven AWS backend supporting high-concurrency application and AI workloads, with patterns that enabled independent feature scaling and safer production releases.
- Built production AI services including a RAG-based AI Coach using Gemini and Vertex AI with streaming and function calling, strengthening practical experience with context assembly, model behavior, reliability controls, and safe AI usage.
- Implemented MCP-style integrations and dynamic UI patterns that connected AI services to external tools and rendered context-aware interfaces, reducing custom integration overhead and improving workflow flexibility.
- Used AI tools such as Claude-like coding assistants, Gemini, and spec-driven workflows for implementation, debugging, documentation, and research, increasing delivery velocity by 3-5x while maintaining strong validation for correctness, security, and cost.
- Built and deployed TypeScript/Node.js services and AppSync GraphQL APIs, improving query performance by up to 90% through data-model redesign, caching strategy, and index optimization.
- Reduced analytics event noise by about 50% by redesigning Customer.io and Mixpanel flows into a backend-authoritative model with shared Lambda layers and cleaner event contracts.
- Reduced AWS infrastructure costs by 30% through service optimization, resource right-sizing, and tighter operational controls, balancing performance, reliability, and cost.
- Authored BRDs, TRDs, and implementation plans that created clarity from ambiguity and served as the context layer for fast, AI-augmented delivery across backend, web, and mobile work.
- Led the migration from Amplify Gen 1 toward a CDK-based backend architecture, improving deployment reliability, simplifying backend release flows, and increasing operational control across environments.

HUPPY PET | Full-Stack Software Developer (Personal Project)

Vancouver, BC | Nov 2023 - Mar 2024

- Architected and deployed Node.js/Express services, background workers, and APIs using REST and GraphQL to support mobile and web product flows.
- Built cloud-connected product functionality across AWS, Firebase, Cloudflare, and MongoDB Atlas, with emphasis on practical delivery and end-to-end ownership.
- Developed cross-platform mobile functionality with React Native while reusing core business logic from the web stack to improve consistency and reduce delivery time.

FORTIFY ENTERPRISE INC. | Full-Stack Software Developer / iOS Developer

Vancouver, BC | Sep 2020 - Nov 2023

- Delivered multiple production applications across native mobile and supporting web work, including a product with 100M+ downloads, 150K+ active users, and support for 18 languages.
- Improved storage and synchronization flows by migrating to MongoDB Realm, reducing local database and network calls by more than 60%.
- Improved large-media transfer performance by 85% through asynchronous Swift workflows integrated with AWS S3.
- Contributed to code reviews, unit testing, and cross-team delivery across multiple products, reinforcing quality and maintainability in fast-moving client environments.

BBTV / Software Development Engineer in Test (SDET)

Vancouver, BC | 2019 - Sep 2020

- Built a new automation framework that reduced testing and deployment time for five projects by 50% and improved the reliability of CI/CD feedback.
- Reduced manual testing effort by 65%, allowing teams to focus more on automated coverage and test-driven development practices.

TECHNICAL SKILLS

Languages & Backend: TypeScript, JavaScript, Node.js, GraphQL, REST, SQL, Express.js, AppSync

AI & Agentic Workflows: Claude Code, Gemini, OpenAI, Vertex AI, RAG, function calling, prompt engineering, streaming responses, MCP-style integrations, AI-assisted development workflows

Cloud & Architecture: AWS Lambda, S3, SQS, Cognito, CloudFormation, EC2, DynamoDB, Pinpoint, IAM, Secrets Manager, GuardDuty, CloudWatch, CI/CD, event-driven patterns

Web & Mobile: React, Next.js, TypeScript, HTML/CSS, Swift, SwiftUI, React Native

Data & Observability: MongoDB, DynamoDB, relational data modeling, CloudWatch, Sentry, Crashlytics

Ways of Working: architecture design, technical specs, code reviews, startup ownership, ambiguity handling, cross-functional collaboration

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, with Honors - Kazan National Research Technological University

Certifications: React, iOS Mobile App Development, Java Application Development, Web Development Bootcamp, Professional HTML/CSS
